

Traffic Management and Safety

Experience has shown that traffic safety goes hand-in-hand with smooth and efficient traffic operations. Designing transportation systems to be smooth flowing, safe, efficient, and intuitive for drivers takes a team skilled in all facets of traffic engineering and traffic management.

Stanley Consultants has experience in road safety audits, design of safety improvements, and utilizing the Highway Safety Manual (HSM.) We have expertise in the conventional techniques of signage, signals, and markings, as well as a wide variety of intelligent transportation systems (ITS). Our ITS experience includes measures such as variable message signs, ramp meters, video cameras, fiber and wireless system communications, traffic operations control centers, and ITS infrastructure integration.

Whether you require high level policy and strategic consultation at the beginning of a project or detailed engineering at the design stage, you'll benefit from the commitment and dedication provided by Stanley Consultants.

Freeway Signing and Pavement Marking

Maintenance of Traffic

Roundabout Design

Overhead Lighting for Freeway

Signalization

Traffic Management and Safety Services

- Traffic Analysis and Operational Studies
- Roadway Safety Audits
- Roadway Lighting, Signing, Pavement Marking
- Signalization
- Intelligent Transportation Systems (ITS)
- Maintenance of Traffic Plans
